## Experience

### Full Stack Developer

Upwork Freelance • Chicago, IL

03/2022 - 03/2024

*Project: Developing data scraper for Oddseeker, a website that aggregates online gambling opportunities*

- Designed and implemented a multi module architecture for the entire project.
- Engineered and delivered app, which leverages **CRON**, queues, and caching mechanisms to check the largest gaming casino resources for the presence of new games or updates for existing ones.
- Scraped over 20,000 games using individual modules for each resource and the **GPT** chat API for content generation.
- Implemented an interface to showcase these games to the client, further facilitating their integration into the client's main web application as a separate page for each game using generated content and scraped data.

*Project: Improving coding flow, lighthouse metrics, and caching for Oddseeker website*

- Improved task efficiency, in a team of five individuals, by implementing cutting-edge **Laravel** technologies, resulting in a 40% reduction in allotted time for project tasks completion.
- Implemented dynamic page generation, boosting the site's search engine ranking and significantly improving **SEO**.
- Implemented advanced caching mechanisms, optimized query execution time, and conducted in-depth analysis of media data, resulting in a 20% improvement in Lighthouse metrics.

### Full Stack Developer

CUDEV • Kharkiv, UA

12/2019 - 03/2022

*Project: Developing e-commerce template for easy implementation by client to quickly improve multiple websites*

- Collaborated with a team of six to develop a responsive **e-commerce** template from the ground up, including managing a substantial user flow, with usage spikes exceeding 10,000 users per day.
- Implemented features such as comments, **Google Pay**, **Apple Pay**, **PWA** offline mode, reviews, and more.
- Achieved a 250% increase in sales across multiple e-commerce stores following the initial implementation of the template and successfully implemented template on more than 10 online stores .
- Led team of four including developers and project manager, conducted interviews, mentored new hires, and conducted code reviews, resulting in significant productivity improvements.
- Reduced release time by configuring testing flow and implementing **CI/CD**.

*Project: Creating and improving management of websites for e-commerce client using AWS*

- Led **AWS** e-commerce project for 50+ sites, enhanced management utilizing Google Sheets and **CLI**, resulting in a doubling of task speed.
- Implemented over 30 new medium and small-sized websites and deployed them using **AWS: EC2/WorkMail**, and the **LAMP** stack.
- Implemented **Certbot** on the server side, achieving a cost-saving of over 35% for all current and future websites.

## BackEnd Developer

Toucan Solutions • Kharkiv, UA

03/2019 - 12/2019

*Project: Developing warehouse management SaaS applications*

- Developed and implemented an **MVC** (Model-View-Controller) architecture-based framework following **SOLID** principles, which was shared as a **Composer** package and applied in various other projects.
- Wrote unit tests and automated tests, leading to a 25% reduction in bug-related delays, as measured by the increased speed in completing subsequent tasks.
- Led a three-person team to build and successfully sell a Warehouse Management **SaaS** Applications based on the created framework. The product was sold to four different clients and subsequently supported.

## Full Stack Developer

freelancer.com • Kharkiv, UA

03/2018 - 03/2019

*Project: Developing company portfolio with flexible editor*

- Constructed a theme and multiple plugins, which formed the foundation for developing a fully editable **WordPress** backend.
- Integrated a fast-responsive **React JS** frontend, establishing communication through **GraphQL** between the two.
- Reduced the application size by 4 times through modifications and webpack configurations. Fully configured two domains for production and pre-production, implementing full automatic and functional testing before deployment.

## Education

### Master of Science (MS), Computer Science, 2018

International Economics and Humanities University • Ukraine
